

# Now for the first time, you can detect HIV 1+2 in urine and saliva

Wellcome™ HIV 1+2 GACELISA is the first commercially available EIA to detect antibodies to HIV-1 and HIV-2 in urine, saliva and dried blood spots. So you can determine HIV antibody status without having to use invasive sampling methods.

There are several important benefits.

Difficult-to-bleed individuals can now be easily tested; safer sample collection and processing; ease of specimen collection without the need for highly trained personnel – especially useful in remote locations; ideally suited for epidemiology studies.

Confidence and reliability of results is assured. The use of a novel IgG-antibody capture format and cyclic enzyme amplification technology produces an extremely sensitive assay. This enables testing of samples such as urine, saliva and eluates from dried blood spots which have very low antibody levels.

If you would like to find out more about Wellcozyme HIV 1+2 GACELISA, just contact your local Wellcome Diagnostics' sales office using the telephone numbers given below.

HIV3

**Think  
about  
it**

You make a clinical diagnosis. Do you ever consider the thought processes by which you arrived at it? Medical students and practitioners are often concerned with examples of diagnostic logic, but seldom consider them in the context of a general philosophy. Is diagnostic logic out on a limb, or is it based on the same principles as logic in general?

In *Logic in Medicine* doctors and philosophers combine to provide a coherent system of diagnostic logic with a broader view of the science and art of reasoning.

### The Medical Society for the Study of Venereal Diseases

*President:* Dr M A Waugh

The General Infirmary at Leeds, Leeds LS1 3EX

The object of the Society is to bring together those interested or engaged in the diagnosis, treatment, and community medical aspects of sexually transmitted diseases. The Society meets regularly in London at the Royal Society of Medicine for the reading of papers, discussions, and presentation of cases. An out-of-London meeting is held in the Spring. Annual subscription for membership of the Society is £50.

Applications for membership are welcome and forms can be obtained from the Honorary Secretary, Dr M J Godley, Florey Unit, Royal Berkshire Hospital, Reading RG1 5AN.

Non-specialists overwhelmed by too many systematic descriptions of individual disease will welcome the new approach of *ABC of Dermatology*. Here the history, clinical appearance, and pathology of a few common key conditions are discussed and then as a basis for comparison with other skin diseases. Also dealing in detail with allergic reactions, autoimmunity, acne, and infections, this handbook is **fully illustrated in colour**, providing a clear guide to assessment and treatment as well as an understanding of the histological changes underlying the clinical presentations.

## Expert information on important problems

It is vital for all doctors to keep up to date with the facts about AIDS. The second edition of *ABC of AIDS* has been completely revised to give a clear picture of the present state of knowledge about the epidemic and current approaches to treatment. It also includes two new chapters, on HIV infection related to misuse of drugs, and HIV infection in children. Edited by Michael Adler, a leading authority on the topic, the *ABC of AIDS* is a concise, authoritative guide that all medical practitioners should read.

January 1991  
UK £10.95; Abroad £13.50  
(BMA members: £9.95 or £12.50)

The number and range of sexually transmitted diseases have been increasing steadily in the past few years, and the second, revised edition of the *ABC of Sexually Transmitted Diseases*, includes the most up to date figures as well as new chapters on AIDS and psycho-sexual problems. Doctors need to be aware that common clinical conditions such as rashes, vaginal discharge, and pelvic pain may have a sexual origin and in the new edition of this invaluable handbook Professor Michael Adler gives expert guidance on the diagnosis and management of these conditions.

August 1990  
UK £11.95; Abroad £13.50  
(BMA members: £10.95 or £12.50)

The lung is the organ most affected by the opportunistic infections that occur in patients with AIDS. Pneumocystis pneumonia occurs in up to four fifths of such patients in Europe and North America, while tuberculosis is a major factor in Africa. As the numbers of patients with AIDS increase, respiratory physicians throughout the world are more likely to be concerned in their management. In *AIDS and the Lung* experts review the problems, emphasising practical points and providing up to date information on this rapidly changing subject.

September 1990  
UK £8.95; Abroad £10.00  
(BMA members: £8.45 or £9.50)

#### Prescribing information

*Indications and dosage:* Systemic candidiasis: 400mg on the first day followed by 200-400mg once daily. Cryptococcosis, including meningitis: 400mg on the first day followed by 200-400mg once daily. Maintenance therapy to prevent relapse of cryptococcal meningitis in patients with AIDS at least 100mg daily. Oropharyngeal candidiasis: 50-100mg once daily for 7-14 days or longer in immunocompromised patients. Other mucosal candidal infections: 50-100mg once daily for 14-30 days. Vaginal candidiasis: single 150mg dose. Use in the elderly - as above except for those renally impaired - see data sheet. Use in children - not recommended. *Administration:* Diflucan may be administered either orally or by intravenous infusion at a rate of approximately 5-10ml/min. The dosages for the two routes are equivalent. *Contra indications:* Hypersensitivity to fluconazole or related triazoles, pregnancy and women of childbearing potential unless adequate contraception is employed.

*Warnings:* Lactation: Not recommended. Renal impairment: dosage reduction may be necessary, see data sheet. *Drug interactions:* Monitor patients on concurrent anticoagulants, oral sulphonylureas, phenytoin or rifampicin. *Side effects:* Nausea, abdominal discomfort, diarrhoea and flatulence. *Package Quantities and basic NHS Cost:* 50mg capsule, calendar pack of 7, £16.61 (P1. 57/0289); 200mg capsule, calendar pack of 7, £66.42 (P1. 57/0317); 150mg capsule, pack of 1, £7.12 (P1. 57/0290); Bottles of 25ml and 100ml containing Diflucan 2mg/ml intravenous infusion - 25ml (50mg) bottle, £7.32. 100ml (200mg) bottle, £29.28 (P1. 57/0315). Hospital prices are available on request. *References:* 1-4 Data on file, Pfizer Ltd. Further information on request.

# Antifungal therapy that's severe on the infection, not on the patient.

Diflucan Oral/I.V. is  
highly effective, well tolerated  
therapy with a convenient,  
once a day dosage and  
administration.

Overall clinical responses  
in deep-seated fungal infections  
are impressive: 87% in systemic  
candidiasis<sup>1</sup>, 96% in mucosal  
candidiasis<sup>2</sup> and 62% in  
cryptococcal meningitis.<sup>3</sup>  
Tolerability is similarly impressive  
with adverse effects comparable to  
placebo.<sup>4</sup>

Diflucan Oral/I.V. Treating  
invasive fungal infection with  
an iron fist and patients with  
a velvet glove.

**Diflucan** ORAL/I.V.  
fluconazole \*Trade Mark

*Counters invasive fungal infection*
